## AM Seminars

	<u>Hours</u>	<u>Fee</u>	<u>LHBA Member</u>
_____ <b>Building Planning and Chapter 3 of the 2018 IRC</b>	<b>2 hours</b> , 8am—10am	<b>\$50</b>	<b>\$25</b>

This class features an overview of the IRC's Chapter 3 where guidelines establish the minimum level of structural integrity, life safety, fire safety and livability for inhabitants of residential structures. Chapter 3 encompasses the code requirements specific to the building planning sector of the design and construction process. Attendees will review codes related to light, ventilation, sanitation, minimum room size, ceiling height and environmental comfort. This class will also cover life-safety provisions including glazing, stairways, guards at elevated surfaces, window and fall protection, and rules for means of egress. **Instructor: Jim Sherman, Johnson County Licensing Official**

_____ <b>2018 IRC Wood Wall Bracing</b>	<b>2 hours</b> , 10am—Noon	<b>\$50</b>	<b>\$25</b>
---	----------------------------	-------------	-------------

This class covers "A Guide to the 2018 IRC® Wood Wall Bracing Provisions" jointly produced by the International Code Council (ICC) and the Engineered Wood Association (APA). It is ideal for Architects, Class B and C Contractors and Class D Framers. Topics to be covered will include: History and Motivations for Wind Bracing, Mechanics of Wind Bracing, Braced Wall Lines, Braced Wall Panels, and Construction Methods. One of the things that make this part of the code book so overwhelming is that it includes tables and rules for other regions that have seismic activity and higher wind speeds that do not apply to the central U.S. Attendees will receive a Quick-Reference Guide that is an abridged version of the code with the basic rules, tables and a step-by-step process for determining wall bracing requirements. Several examples will be worked in class to demonstrate the use of difference techniques. **Instructor: Neal Ezell, Ezell-Morgan Construction**

## PM Seminar

_____ <b>Electrical Safety for Builders, HVAC, Plumbers and Electricians</b>	<b>4 hours</b> , 1pm—5pm	<b>\$100</b>	<b>\$50</b>
--	--------------------------	--------------	-------------

Electricity is the 2nd leading cause of death in construction. Electrocutions make up 125 of construction fatalities annually. Builders and all tradesmen need to have a solid understanding of the electrical systems on the job site and how to safely work on and around them. In this class, you will learn basic electricity fundamentals, the effects of electricity on the human body, how to identify hazards, short circuit calculations, how to avoid arcing, and wiring techniques. **Instructor: Verlon Myers, Crown Technical Training Association**

**Hours** \_\_\_\_\_ **Fee Enclosed** \_\_\_\_\_

**Return registration and fee to: LHBA, P.O. Box 3490, Lawrence, KS 66046 / info@lhba.net**
